Market Research

We analyzed several leading consumer benefits and coupon management applications to understand market trends, competitor advantages, and disadvantages.

Fid

Uses advanced business intelligence and machine learning to recommend the optimal discount for specific purchases, based on the user's active cards and club memberships.

Tismo

Offers digital punch cards, coupon management, rewards tracking, and real-time alerts for local deals, prioritizing ease of use and personalization.

iStudent

Tailored for students, offering targeted deals in fashion, tech, restaurants, and fitness, along with exclusive campaigns and curated content.

Cashback

Enables users to earn percentage-based refunds on transactions across fashion, tech, and travel, featuring boosted rate campaigns.

Jemix

Focuses on e-commerce cashback with a structured VIP program that grants higher return rates and exclusive tier rewards for active members.

Coupy

Provides localized discount discovery across fashion and dining, supporting seamless redemption both online and in brick-and-mortar stores.

The following table presents a comparison between the functional capabilities of existing systems in the market that share a similar nature to the system we are developing.

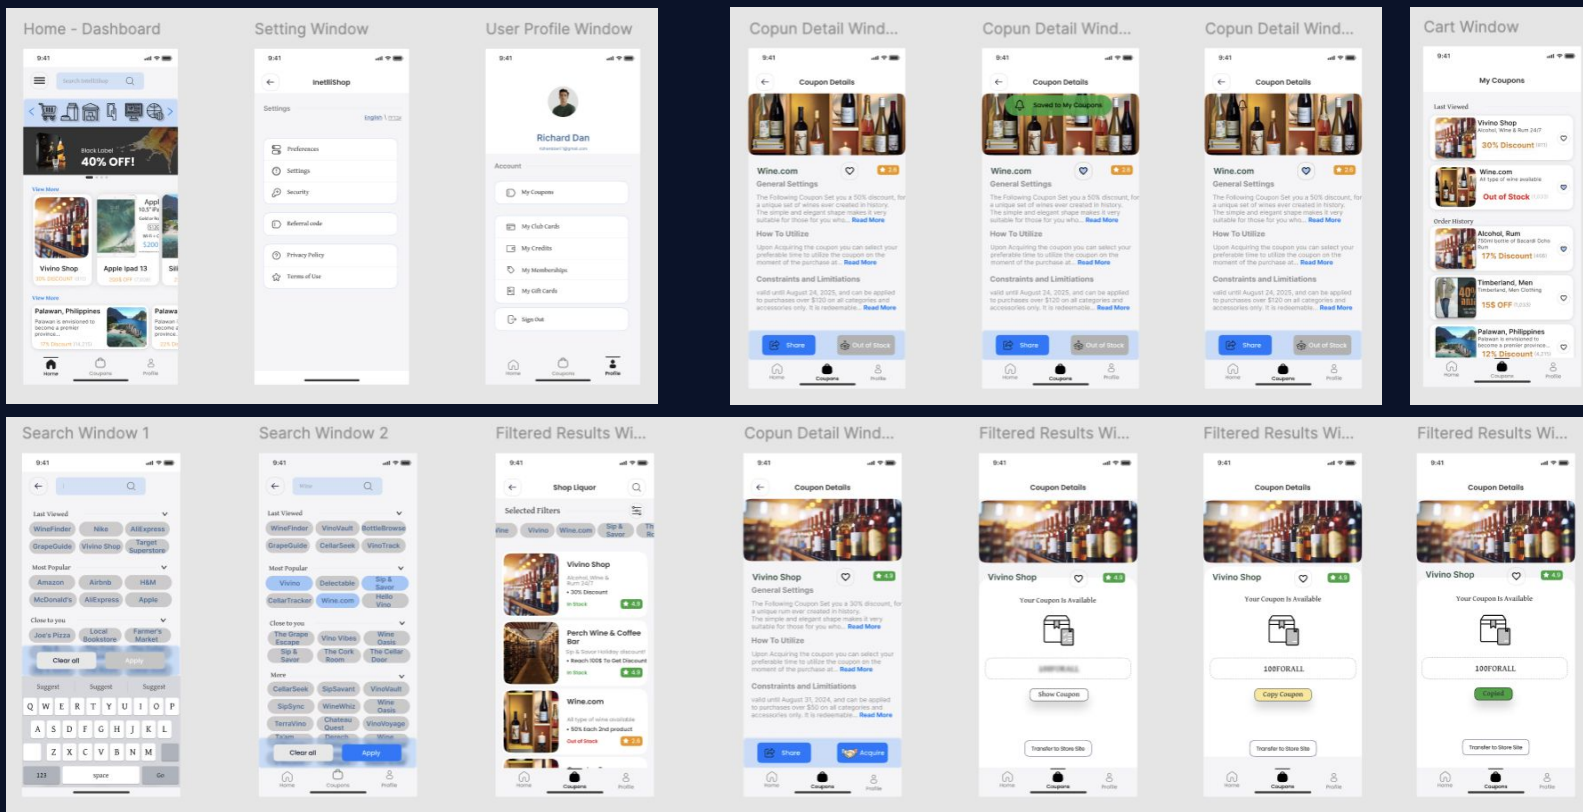

Abilities/System	Fid	Tismo	Jemix	Coupy	Cashback	iStudent	IntelliShop (Ours)
Generic Filter	✓	✓	✓	✓	✓	✓	✓
Filter based AI	✗	✗	✗	✗	✗	✗	✓
Purchase History	✓	✓	✓	✓	✓	✓	✓
Personal Recommendations	✓	✗	✗	✗	✗	✗	✓
Payment Processing	✓	✗	✗	✗	✗	✓	✓
Account Profile Mgmt.	✓	✓	✓	✓	✓	✓	✓
Notifications	✓	✗	✗	✗	✓	✓	✓
Database Update Trigger	✗	✗	✗	✗	✗	✗	✓
Customer Support	✓	✗	✓	✓	✗	✗	✗
Requests and Feedback	✓	✗	✓	✓	✗	✗	✓
Specific Target Audience	✗	✗	✗	✗	✗	✗	✓

Our analysis focused on the functional capabilities of each application, the manner in which they address user needs, and the advanced technologies they implement.

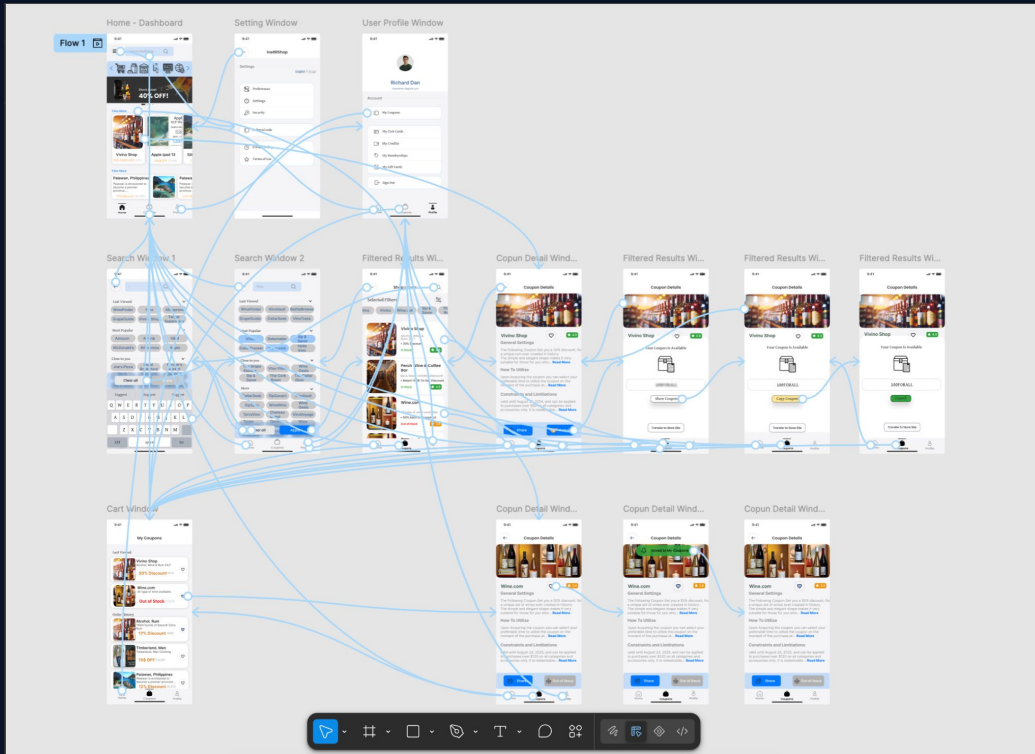

The findings of this survey provide valuable insights for the development of our application, allowing us to strategically position ourselves in this highly competitive market.

Figma Design

Explore the interactive user interface, system wireframes, and user experience flows mapped out on Figma.

Functional Requirements

Detailed architectural breakdown of the system's core capabilities and UI touchpoints.

Backend

/ Data Collection

- **Automated collection of discount and benefit information** from external sources

Backend

/ Data Processing

- **Uses AI to enrich gathered data** by analyzing content

01

/ Home Dashboard

- **Displays user profile details** and associated membership categories
- Provides **initial category-based filtering** and external links
- **Generates personalized recommendations** based on status, clubs, and preferences

02

/ Advanced Search

- **Label Filters** by final price, discount percentage, category, and user status
- Supports free text **keyword search**
- Leverages **AI for intelligent text analysis to optimize filter selection**

03

/ Favorites System

- Enables bookmarking and **saving specific promotions** for quick future reference

04

/ Profile & Settings

- User **registration** and secure profile management
- Enables **updating profile** or deleting account
- Inclusive UI supporting system-wide **Day and Night modes**

Technology Stack

Frontend

Kotlin based android application

Backend

Python based Django framework

DataBase

MongoDB

Networking Architecture

REST API, Json, Retrofit

Evolution of IntelliShop

The Origin Story

Project v1: Web App

Developed a year ago as a comprehensive software engineering degree final project.

- Established a robust **backend infrastructure** and active database.
- Laid the operational foundation for intelligent, consolidated promotional tracking.

Original Source Code:

github.com/GiladShekalim/Intelli_Shop

The Next Level

Project v2: Android App

A strategic opportunity to transition the platform into a modern mobile ecosystem.

- **Direct Integration:** Hooking a fresh client directly into the pre-built backend and DB schema.
- **Real-world Learning:** Gaining deep engineering experience in code adoption and cross-platform architecture alignment.
- **Seamless Sync:** Maintaining exact business logic parity between legacy backend and mobile UI.
